DETAILED ACTION

Claim Objections

1. Claim 1 objected to because of the following informalities: It is not clear whether if there is more than one capacitor. Appropriate correction is required.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-2 are rejected under 35 U.S.C. 102(b) as being anticipated by Turner (5995392).

As to claims 1 and 2, Turner discloses in figures 1 and 2, an apparatus, comprising: a direct current (dc) electric circuit which includes one or more capacitive elements (20) and which is configured to deliver electric power to a load (40); a protective circuit element (70) configured to interrupt power to the dc circuit in the event that electric current drawn by the circuit from a power source exceeds a threshold; and a positive temperature coefficient (PTC) device (50) connected in parallel to the protective circuit element, wherein: the PTC device is configured such that before current is admitted to the circuit through the protective element, there can be admitted to the circuit through the PTC device a current at least sufficient to charge the capacitive elements (col. 1, lines 10-50); and the PTC device is further configured to substantially

increase in electrical resistance in the event that the current passing through it exceeds a threshold (see col. 3, lines 55-67 & col. 4, lines 1-26)
